

2. Temporary Diversion Dike

Definition: A temporary ridge of compacted soil located at the top, midslope, or base of a disturbed area.

- Purpose:*
1. To divert storm runoff from higher drainage areas away from unprotected slopes to a permanent channel or temporary channel diversion.
 2. To divert sediment-laden runoff from the midslope of a disturbed area to a temporary slope drain.
 3. To divert sediment-laden runoff from the base of a disturbed area to a sediment trapping facility.
