

Project Overview

Project Scope

The DPAC Galleria Concrete Improvements project was approved along with various additional projects aimed at addressing deferred maintenance needs within the Denver Performing Arts Complex (DPAC). This project involved the repair of failed waterproofing/surface treatment within the pedestrian Galleria and atop the 13th Street tunnel, which first underwent structural improvements as part of another DPAC deferred maintenance project. Maintenance activities included repair of the failed waterproofing layer and replacement of the topping slab with new concrete. This deferred maintenance project will lengthen the usable life of the DPAC parking garage structure and the adjacent Galleria.

BETTER DENVER BOND PROGRAM
PROJECT COST:
\$312,271

Project Team

Project Manager: Stephanie Reed
Designer(s): Anderson Hallas Architects PC
Constructor(s): Turner Construction Company

Project Delivery

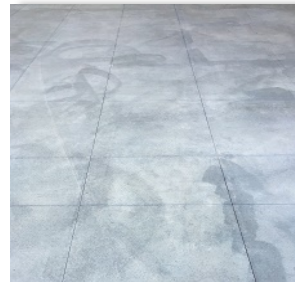

OCOC
