Project Scope

Renovation work at the Ross-Cherry Creek Branch of the Denver Public Library comprised the following major elements: reconfiguration of interior spaces to enhance circulation; upgrades to electrical, fire protection, lighting, mechanical, and plumbing systems; updates to interior finishes including new carpet and paint; upgrades to furniture and equipment; procurement and installation of self-check stations; as well as installation of a radio frequency identification (RFID) system. Together, the self-check and RFID technologies allow for automated self-check of library media and provide numerous benefits including improved circulation/collection management, reduced theft of library materials, increased efficiency of library staff, and an enhanced customer experience.

Project Team

Project Manager: Ken Matthews
Designer(s): Studiotrope
Constructor(s): Interlock Construction Corp., White Construction Group

Project Delivery

OCOC
