

## Project Overview

### Project Scope

Renovation work at the Ford-Warren Branch of the Denver Public Library comprised reconfiguration of interior spaces to enhance circulation, upgrades to mechanical and fire protection systems, updates to interior finishes and furnishings, landscaping improvements, procurement and installation of self-check stations, as well as installation of a radio frequency identification (RFID) system. Together, the self-check and RFID technologies allow for automated self-check of library media and provide numerous benefits including improved circulation/collection management, reduced theft of library materials, increased efficiency of library staff, and an enhanced customer experience.

BETTER DENVER BOND PROGRAM  
PROJECT COST:  
**\$1,044,761**

### Project Team

Project Manager: Greg Bertram, Kent Grissom  
 Designer(s): Humphries Poli Architects PC  
 Constructor(s): White Construction Group, FCI Constructors Inc.
