

Quebec Street Multimodal Improvement Project

Community Working Group

The City and County of Denver is committed to working closely with the local community to inform the environmental and design processes of the *Quebec Street Multimodal Improvement Project*.

As part of the ongoing public involvement effort, and to ensure that community members within the project area have an opportunity to help inform the selection of the preferred alternative, we have formed a project-specific Community Working Group (CWG). The members of the CWG will directly collaborate with Denver to help provide valuable input throughout the environmental and design process and serve as an important connection between the project and the broader community.

The CWG is comprised of community leaders from Registered Neighborhood Organizations, business organizations, civic groups and individual residents who live in the project area to reflect broad and diverse representation. The CWG members are identified below. Each member may appoint an alternate if they are unable to attend a particular meeting.
