Message from the Mayor

Dear Friends,

Denver’s streets are not as safe as they should be. Since the beginning of 2016, 90 people have died while walking, bicycling, taking transit, riding a motorcycle or driving in the city. These are numbers that have only increased over the past several years and, in large part, it is our seniors, children and underserved communities that are being victimized.

This loss of life is a tragedy, and we must do better. Ensuring the public’s safety is the highest responsibility of a mayor, which is why last year, I committed to Vision Zero.

Our goal: Zero traffic-related deaths by 2030.

We need to make Denver’s streets safe for everyone – no matter where they live in the city, no matter their means and no matter their choice to walk, bike, drive or take transit.

Traffic deaths and severe injuries are unacceptable and preventable, and safety must be the most important consideration for every Denver street.

The Denver Vision Zero Action Plan is a five-year plan to set us on a clear path to achieve zero traffic deaths by 2030. The plan represents significant collaboration among city agencies, state partners, community partners and Denver residents. These actions are a key component of my new Mobility Action Plan, which will accelerate the projects, policies and programs to move more people, more efficiently and more safely. Through better processes and collaboration, improved street design, safe speeds, a culture of safety, and improved data and transparency, we will save lives.

The city cannot achieve this ambitious goal alone. This Vision Zero Action Plan unites all of us around a common goal. I look forward to working together to make Denver an even stronger—and above all, safer—city.

Respectfully,

Michael B. Hancock
Mayor
We Remember
Your memory inspires us to take serious action.

Traffic Violence Victims
This Action Plan is dedicated to the victims of traffic violence in Denver—the daughters, sons, mothers, fathers, wives, husbands, siblings, and friends who have been killed or severely injured on our streets.

Steve Hersey
The Denver transportation community lost a beloved colleague, friend, and mentor on May 4, 2017 when Steven James Hersey passed away. As Director of Traffic Operations for Denver’s Transportation and Mobility Division of Public Works and City Traffic Engineer, Steve was a major contributor to Vision Zero and the actions that are included in this Plan. Steve was an innovative thinker and problem solver, and he was incredibly passionate about making our streets safe for all.
Our Call to Action
Page 1

Let’s Take Action
Page 10

Positive Changes
Page 26

How We Developed the Plan
Page 30
In February 2016, Mayor Hancock announced Denver’s commitment to Vision Zero, joining cities worldwide in a movement to eliminate traffic fatalities and severe injuries. The City and County of Denver and its partners are working together to realize this bold vision. This five-year Action Plan sets Denver on a clear path to achieve zero traffic deaths by 2030.
Our Call to Action

In 2016, **61 people were killed** in traffic crashes in Denver and hundreds were severely injured. Someone loses their life every six days while traveling in our city.

We do not have to simply accept fatal crashes as inevitable. Crashes are not accidents, they are preventable—with the right actions and commitment. Everyone has the right to safely travel on our streets no matter where they are going and how they travel. That is why the City and County of Denver is committed to eliminating traffic deaths by 2030 through a **Vision Zero** campaign, initiative, and program.

**Why is Vision Zero Needed?**

Because no other goal is acceptable.

The routine loss of life caused by motor vehicle crashes on our streets is a **preventable public health crisis** that deserves our focus and resources. Serious traffic crashes cause significant harm to individuals, families, and society. No one thinks that traffic deaths among friends and family are acceptable—yet historically we have not managed our transportation system with a goal of zero fatalities in mind.

In Colorado, motor vehicle crashes account for more than **twice the number of deaths as homicides**. Among all types of injuries, they are the fourth leading cause of death and the second leading cause of hospitalization. Between 2012 and 2015, traffic injuries represented 31 percent of paramedic encounters and 26 percent of ambulance trips.

The recent trend on Denver’s streets is alarming: despite concerted efforts to create multimodal streets, investments in transit, and advances in technology, **traffic deaths have continued to rise over time** (Figure 1). Our crash rate per population is much higher than our peer cities. And while pedestrians and bicyclists are a small portion of overall street users, they represent an unacceptably large portion of traffic deaths (Figure 2).

As Denver’s population is projected to increase by up to 250,000 new residents by 2040, to nearly 1 million people, a bold intervention and strong commitment from City leaders and partners—including citizens—will be required to reverse the trend of increasing traffic deaths.
The Denver Vision Zero Action Plan establishes a roadmap for the City to eliminate traffic deaths on its streets. As part of Denver’s 2017 Mobility Action Plan, it represents a shift in our transportation philosophy to prioritize the preservation of human life over the convenience of traveling quickly through our city. While these changes won’t always be easy, we are guided by the determination to save lives and reduce injuries for all Denver residents and families.

What is Vision Zero?

Vision Zero is a transportation safety philosophy that was developed in Sweden in the late 1990s to eliminate traffic deaths and serious injuries in the transportation system. Through its Vision Zero efforts, Sweden has reduced traffic fatalities by half, making it one of the safest places to travel in the world.

A central tenet of Vision Zero is that people should not be killed or seriously injured as a consequence of mobility. Vision Zero recognizes that humans make mistakes and therefore the transportation system be designed to minimize the consequences of those errors.

In the past five years, over 20 U.S. cities, including Denver, have adopted Vision Zero goals and developed plans for eliminating traffic deaths. While Vision Zero efforts in the U.S. share common principles with Sweden’s policy, each city has adapted the approach to their unique circumstances and needs. In particular, many U.S. cities have embraced equity as a key aspect of their Vision Zero efforts, aiming to ensure that efforts to improve traffic safety do not inadvertently exacerbate other social tensions such as racial profiling.

The federal government and most states, including the Colorado Department of Transportation (CDOT), have also established a goal of eliminating traffic fatalities, providing additional support for this initiative.

Fundamental Principles of a Meaningful Vision Zero Commitment

These principles are core to successful Vision Zero efforts.

1. Traffic deaths and severe injuries are acknowledged to be preventable.
2. Human life and health are prioritized within all aspects of the transportation system.
3. Acknowledgment that human error is inevitable, and transportation systems should be forgiving.
4. Safety work should focus on systems-level changes above influencing individual behavior.
5. Mitigation of speed is recognized and prioritized as the fundamental factor in crash severity.

(Source: Vision Zero Network)
Denver’s Needs
In February 2016, Mayor Hancock announced Denver’s commitment to Vision Zero and the multi-departmental effort to develop this Action Plan began. Based on a review of crash data and input from the Technical Advisory Committee and the public, five primary needs emerged. These needs are also the Action Plan themes (see Let’s Take Action on page 11).

1. Enhance Processes and Collaboration
Since Vision Zero is a new philosophy for managing the transportation system, many foundational changes are needed to institutionalize the approach. Though the City regularly coordinates about transportation projects and safety initiatives internally and externally as a matter of practice, existing processes, programs, and laws do not explicitly address the loss of life on our streets in a proactive, data-driven manner. The City needs an established, funded Vision Zero program with targeted processes and the right tools to ensure that systematic street design and cultural changes seamlessly happen.

2. Build Safe Streets for Everyone
When we asked people what the City should do to improve traffic safety, the overwhelming top response was: Build safe streets for everyone, including safe pedestrian crossings, bicycle facilities, and roadways. Pedestrians, bicyclists, and motorcyclists are especially vulnerable when involved in crashes because they are less protected, and therefore streets should be designed with these road users in mind. Together, these three modes account for only six percent of crashes and seven percent of total users of the street, but over half of all traffic deaths in Denver.

Street design directly influences driver, pedestrian, and bicyclist behavior. Though people will always make mistakes and we cannot predict all human behavior, our streets should slow traffic, provide clear paths for all modes of travel, have safe crossings, and generally encourage safe behaviors. A safe system is one where different types of street users, each with different travel tendencies and speeds, are physically separated and protected such that if a crash does occur, it happens at a slow enough speed to avoid death or severe injury.

An analysis of Denver crash data showed two street-design related issues: 1) most fatal crashes occurred at mid-block locations and not intersections, especially for pedestrians, and 2) most pedestrian and bicyclist fatalities occurred in unlit conditions.

Some streets, most notably wide arterials with higher speeds, are worse than others and need to be retrofitted. In Denver, 50 percent of traffic deaths occur on just 5 percent of our streets. It is the City’s—and for state highways, CDOT’s—responsibility to design, build, operate, and maintain our streets. Ensuring that these streets are safe is a foremost consideration of both the City and CDOT.

50% of Denver’s traffic fatalities occur on just 5% of our streets.
Arterial roadways are disproportionately dangerous for all modes in Denver*

- 6x more pedestrians died on arterials than other roads
- 7x more bicyclists died on arterials than other roads
- 4x more drivers died on arterials than other roads

* A larger number of vehicle trips per mile occur on these roadways than other roads in Denver, which contributes to a higher crash total. These figures reaffirm the overall need to focus on areas where the most travel and dangerous conditions exist. Source: DPD

3. Create Safe Speeds

Speed reduction is an essential Vision Zero strategy. Higher speeds not only increase the risk of a crash, but also increase the risk of serious injury or death, regardless of mode. The effects of speed are most pronounced for pedestrians, whose risk of dying if struck by a vehicle increases with vehicle speed.

While higher vehicle speeds are expected on streets with higher speed limits, an analysis of over 300 sites in Denver between 2013 and 2017 shows that drivers are also more likely to speed on streets with higher speed limits. Streets posted at 25 mph saw 25 percent of people driving at least 5 mph over the speed limit, whereas streets posted at 35 mph saw 54 percent of drivers speeding by the same amount.

Related to the tendency to drive faster on these types of streets, many of our arterial streets are generally designed to make higher-speed travel easy and comfortable. The streets responsible for the greatest portion of fatalities in Denver, such as Federal Boulevard and Colorado Boulevard, tend to have higher speed limits and speeding problems.

Speeding was a factor in 53% of fatalities in Denver in 2015.

Speeding was a factor in 53% of fatalities in Denver in 2015.

- 20 MPH
  - 13% Likelihood of fatality or severe injury
- 30 MPH
  - 40% Likelihood of fatality or severe injury
- 40 MPH
  - 73% Likelihood of fatality or severe injury

Source: Impact Speed and a Pedestrian’s Risk of Severe Injury or Death, Brian Tefft, AAA Foundation for Traffic Safety, 2011
These risky behaviors contributed to traffic deaths in Denver:

- **Distracted Driving**: 14% of fatal and injury crashes
- **Speeding**: 53% of fatalities
- **Aggressive Driving**: 15% of fatal and injury crashes
- **Not wearing a seatbelt**: 52% of motor vehicle occupant fatalities
- **Not wearing a helmet**: 64% of motorcycle fatalities
- **DUI**: 29% of fatal and injury crashes

5. **Improve Data and Be Transparent**

To eliminate traffic deaths, we must develop a greater understanding of the factors and circumstances that contribute to crashes and their resulting levels of injury. Without this understanding, our potential for success is limited. Building from the findings of the analysis conducted for the Vision Zero Action Plan, we must continue to collect and analyze crash and speed data while evaluating the safety impacts of future projects.

For the most impact, data needs to be shared with partners and reported to the public on a regular basis. This reporting will not only ensure that we understand and document what works well; it will also tell the Vision Zero story, so that our collective efforts to eliminate fatalities in Denver are widely understood.

**Focus Areas**

Focusing our efforts on the most dangerous streets and in the most vulnerable communities is a responsible use of limited City resources. Though we will look to make systematic changes throughout the city, we have identified a High Injury Network (HIN), representing the corridors in Denver with the highest number of fatal and injury crashes. Collectively, the **HIN accounts for 5 percent of streets in Denver, but 50 percent of traffic deaths**. Focusing on this small area will go a long way in getting to zero.

Implementation of the Action Plan will also be informed by our goal to reduce geographic disparities in traffic injuries and deaths across the city. We have identified Communities of Concern (CoC) in Denver, representing areas that have low income and education levels, high concentrations of seniors, low rates of vehicle ownership, high obesity rates, and high numbers of schools and community centers. The CoC areas account for around 30 percent of the area of Denver, but 38 percent of all traffic deaths and 44 percent of pedestrian deaths.

To equitably address traffic risk in the city, we will prioritize implementation of safety improvements in these areas.

---

4. **Promote a Culture of Safety**

Safer streets and lower speeds will go a long way toward eliminating traffic deaths in Denver. However, we all—Denverites and visitors—must also contribute by making safe transportation decisions. Street design cannot prevent someone from driving under the influence or while distracted, or force them to buckle in themselves or their child.

Denver’s crash data indicates a significant problem with speeding and aggressive driving, driving under the influence, distracted driving, and failure to use motorcycle helmets and seat belts.

Some of these behaviors are correlated with age, gender, mental health, and environmental factors. Over the long-term, prevention-based approaches, such as education and improved access to social services, are likely to offer the most successful approach for addressing risky behaviors. In the meantime, law enforcement can play a greater role by ensuring traffic laws are enforced equitably across modes and communities within Denver, valuing education and engagement over penal justice. While enforcement is needed to establish cultural norms and expectations for the use of the public right-of-way, it should be based on principles of community collaboration and partnership.

---

Source: CDOT
The HIN includes all types of Denver streets, but is mostly multi-lane arterials. It includes:

- 96% arterial streets
- 1% collector streets
- 3% local streets

Source: DPW, DPD
Communities of Concern (CoC) and the HIN

38% of all traffic deaths and 44% of pedestrian deaths happened in the CoC.

There is substantial overlap between the HIN and CoC. We will focus many of our Vision Zero efforts in these areas.

Voices of the Community

The voices of Denver residents were not only a large impetus for the Vision Zero initiative, but an impactful part of the Action Plan’s development. Denverites were engaged in the project through online and in-person surveys, directly influencing our Plan’s themes, strategies, and actions.

We received nearly 2,700 responses to a Vision Zero online interactive map survey, which was available in the spring of 2017. We asked people to drop virtual pins to identify either a great spot or a place of concern. Here are some highlights of what we found:

- The number one locational concern was speeding
- Other top concerns were people failing to yield, poor visibility, and lack of crosswalks
- Concerns were not specific to a time of day or a type of trip—these locations are almost always a problem
- Places of concern were noted across the city, indicating that while there are certainly hot spots, safety is a concern nearly everywhere

The City of Denver will use the map survey results as we consider and develop projects citywide. Whether the project be a school travel plan, an education campaign, or a request for a stop sign, City staff will use the feedback to inform project goals and outcomes. We appreciate that Denver residents provided feedback, we value the information shared, and we will use it to shape projects moving forward.

To engage in face-to-face conversations, to reach those who do not have access to technology, and to reach people who speak Spanish only, the City conducted Vision Zero intercept surveys at four locations in April 2017. The locations were within or adjacent to the CoC and along the HIN, to hear from people who are most affected by traffic deaths. We talked to nearly 200 people, asked them about their general traffic safety concerns, and here’s what we heard:

- The top behavioral concern was speeding, followed by distracted or careless driving
- The top infrastructure concerns were not enough time to cross and the condition of sidewalks
- When asked what one thing the City should do to improve traffic safety, the top response was build safe streets for everyone, including safe pedestrian crossings, bicycle facilities, and motor vehicle facilities, followed by reduce distracted driving

“\nThis street has gotten much busier in the last five years, and it is extremely dangerous to bike down with parking all down the street.

This is an intersection with lots happening. School zone, bus location, lots of left turning vehicles, local shopping district.

Speed limit is 35 mph, most people go 45 mph.”

OUR CALL TO ACTION

Photo by Denver Vision Zero Coalition
LET’S TAKE ACTION
Let’s Take Action

At the heart of Vision Zero is the principle that traffic deaths and serious injuries are unacceptable and, most importantly, preventable. Preventing future traffic fatalities will take a combination of bold actions by many people—not only City and County of Denver agencies, but also by our community and governmental partners.

As a TAC, we developed the nearly 70 actions that follow in close collaboration with stakeholders from all perspectives of traffic safety: transportation, enforcement, public and environmental health, sustainability, community planning, emergency services, parks and recreation, schools, and social justice. Thousands of Denver citizens helped shape the actions by telling us about their traffic safety concerns and wishes.

The following actions were developed to save lives by creating safer streets and promoting safe driving, walking, and bicycling behaviors. These actions include what we need to do to substantially reduce traffic deaths over a five-year period.

Themes

While the goal of this Action Plan is to have zero traffic deaths by 2030, the following themes help to organize the actions. The themes are based on a review of Denver crashes and input from stakeholders and citizens. They are consistent with worldwide and national Vision Zero approaches, yet represent Denver’s priorities.

1. Enhance City Processes and Collaboration
2. Build Safe Streets for Everyone
3. Create Safe Speeds
4. Promote a Culture of Safety
5. Improve Data and Be Transparent

Within each theme, the City and its partners will implement short-term (0-2 years) and medium-term (3-5 years) actions. The following pages include all the Denver Vision Zero actions with timeframes and how success will be measured. The measures listed for each timeframe are presented on an annual basis, where possible, and represent items that should be substantially completed within that timeframe. The partner organizations listed will be the primary champions for each action, though others will undoubtedly be involved.

Acronyms

AAA: American Automobile Association
BMO: Budget & Management Office (Denver)
BID: Business Improvement District
CAO: City Attorney’s Office (Denver)
CDOT: Colorado Department of Transportation

STRAC: Statewide Traffic Records Advisory Committee
TAC: Technical Advisory Committee
TNC: Transportation Network Company
TSMO: Transportation Systems Management & Operations
VZ: Vision Zero
VZC: Vision Zero Coalition
1. Enhance City Processes and Collaboration

Vision Zero is a new approach in the U.S. and as such, “business as usual” will not get us to zero. We need City processes, partnerships, and laws to prioritize traffic safety and allow for systematic change. We need to not only react to tragedies, but be proactive in helping prevent traffic deaths. We will take these actions.

**KEYSTONE ACTION NEEDED**

Establish a permanent, dedicated funding source for Vision Zero implementation and coordination. Continue to create a Vision Zero program with dedicated staff.

By dedicating $2M/year initially and later, $3M/year to Vision Zero projects and programs, and by adding a total of 9 FTE over the next five years, the City will be able to effectively implement many of the actions in this Plan.

2. Build Safe Streets for Everyone

We recognize that people make mistakes, but that those mistakes should not result in death. A safe systems approach means that our transportation system can and will protect all street users. Because our resources are limited, we will first focus on the High Injury Network (HIN) and the most vulnerable Denverites, while looking for opportunities to make citywide changes. We will take these actions.

KEYSTONE ACTION NEEDED

**Update the Transportation & Mobility Policies and Procedures to include treatments with proven safety benefits and how to apply such treatments.**

These documents guide how DPW makes decisions about street design and operations. By updating the policies and procedures, the City will prioritize the reduction of serious crashes in its decision-making and be better positioned to complete the other actions included in this category.

3. Create Safe Speeds

Speed management is a critical component of Vision Zero because it is one of the most influential factors in crash severity and frequency. In Denver, speeds are most problematic on multilane arterials. We will create safe speeds by developing a program with a systematic approach, focusing speed reduction along the High Injury Network (HIN) through automated enforcement and messaging, and creating slow zones within the city. We will pair these actions with the Build Safe Streets for Everyone and Promote a Culture of Safety actions, when possible, so that speed limits are self-enforcing. We will take these actions.

KEYSTONE ACTION NEEDED

Create a speed management program to systematically evaluate and promote safe speeds.

DPW, in partnership with DPD and CDOT, will develop a clear and consistent approach to speed data collection, street design, and automated and manual speed enforcement. By evaluating speed limits citywide, the City and its partners will begin to manage speeds in a more context-sensitive, proactive, and safer way—instead of simply reacting to driver behavior. Creating a speed management program will allow the City and partners to complete all other actions in this category.

4. Promote a Culture of Safety

We’re all in this together. Vision Zero requires creating a Denver culture of good behavior on the part of both the individual and the institution. Promoting a culture of safety includes engagement, education, awareness, and institutional actions. In keeping with the Vision Zero philosophy, our efforts will be evidence-based and will account for the inevitability of human mistakes. We will take these actions.

### KEYSTONE ACTION NEEDED

**Implement a multimodal safety education campaign for all.**

DPW, DPD, and their respective Communications departments will create and deliver a multimodal and multimedia safety education campaign for all street users. By educating Denverites about safe behaviors in a compelling and personal manner, the City will begin to raise awareness, enabling the City and its partners to implement many of the other actions in this category.

5. Improve Data and Be Transparent

A Vision Zero approach is different from previous safety approaches in that it focuses on collecting, analyzing, and using data to save lives. Vision Zero also holds the government and its partners accountable for its commitments. Clear, usable data is essential to progress, not to mention the secondary benefits like telling a compelling story to the public. We will take these actions.

**KEystone Action Needed**

Establish an official crash data source to be used by all City agencies and provide consistent reporting.

DPW and DPD will work together to establish an official data source for traffic crashes so that all City agencies and partners are consistent in reporting and measuring progress. Having a single source for crash data will enable the City to regularly monitor and communicate Vision Zero progress in a meaningful way.

An Equitable Plan

We must reach higher and dream bigger. We must aspire to help everyone, to knock down barriers and create pathways and opportunities where today there are only roadblocks and obstacles. That is the kind of city we must be. It’s the kind of city I know we can be. We will lean in. We will never give up. And we will succeed, all of us, together.

-Mayor Michael B. Hancock, 2016 State of the City Address

EQUITY

justice according to natural law or right; specifically: freedom from bias or favoritism

(Merriam-Webster)

Equity is an important Vision Zero guiding principle. It acknowledges that streets are for everyone and that our transportation system must be safe for all. In Vision Zero planning, an exploration of equity has led to two findings. First, research has shown that traffic crashes disproportionately affect low-income neighborhoods and communities of color. In Denver, nearly 40 percent of all traffic deaths occur in the Communities of Concern (CoC)—those neighborhoods with lower incomes and vehicle ownership and high numbers of seniors, schools, and community centers.

Second, programs like Vision Zero don’t happen in a social vacuum. Enforcement is a critical component of Vision Zero initiatives around the world, yet increasing traffic enforcement—especially in CoC—could exacerbate injustices of the past and inadvertently increase distrust in the very communities the program seeks to serve. Denver’s Action Plan addresses the potential for these unintended consequences in a number of ways:

• Instead of increasing in-person traffic enforcement along the HIN or within CoC, our actions focus instead on street design changes in these areas. These will include safe speed limits, intersection changes, pedestrian crossings, sidewalks, and enhanced street lighting.

• We will increase automated speed enforcement, which is unbiased, along the HIN and along school routes, but we will pair this with warning signs so that drivers are not surprised. The goal will be to reduce speeds along these dangerous routes and ultimately have no violations.

• Instead of increasing fines for traffic violations, we will pilot a “diversion” program, which will offer positive reinforcement and education to encourage safe behaviors.

• We will work with people in the CoC to have discussions and offer education about traffic safety.

• We will incorporate equity and demographic considerations into police officer training courses.

These types of actions will help Denver knock down barriers to safety and enable all to success regardless of age or ability.
Vision Zero Best Practices

**Multimodal Street Design Guidelines**
One of the single biggest influencers of how a street is built is a city’s design standards or guidelines. Transportation Professionals and others look to these types of documents to inform street width, intersection geometry, sidewalk and bikeway configurations, and crossing treatments. Many cities have created new, comprehensive design guidelines to incorporate state-of-the-art principles that prioritize people walking and biking, context-sensitive street typologies and speeds, and traffic safety treatments. Creating multimodal street design guidelines is a key part of a safe systems approach and will allow for more consistency, transparency, and great street design in Denver.

**Parking Restrictions/Daylighting**
Vehicles that are parked too close to intersections or midblock crossings block sight lines, which can contribute to crashes. Eliminating on-street parking near a crossing can improve visibility and in turn, improve safety. Instituting no-parking zones for vehicles within 20-50 feet of an intersection is one strategy to improve sight lines and decrease certain crash types. Where possible and appropriate, this space could instead be filled with street-level bike corrals, curb extensions, or landscaping/green infrastructure that could also have complementary benefits such as improving water quality. Restricting parking near intersections has been shown to reduce crashes and decrease aggressive driving.

**Leading Pedestrian Intervals**
Leading Pedestrian Intervals (LPIs) give pedestrians a head start at a traffic light by approximately five seconds, with the precise time depending on the intersection. This signalized intersection treatment is intended to improve safety by separating the pedestrian crossing from turning vehicles, and by increasing the visibility of pedestrians to drivers. Research suggests that a nearly 60 percent reduction in pedestrian-vehicle crashes can be achieved by adding LPIs.
Slow Zones
Slow zones provide safety benefits through speed limit reductions, often set to 20 mph, that are typically applied through signage, pavement markings, and self-enforcing traffic calming treatments. Zones are typically applied to areas with sensitive land uses, such as residential areas with a concentration of schools or senior centers, that also have clearly-delineated edges (e.g., by arterials or railroads). Research shows that 20 mph speed zones are effective in reducing pedestrians' risk of injury or death, with the greatest benefits observed for children under age 15. Slow zones have been found to reduce the number of pedestrians killed or seriously injured by up to 35 percent.

Median Refuges
Median refuges (also called median crossing islands) provide protected spaces for pedestrians and bicyclists in the middle of the street to facilitate crossings. They are often used to calm traffic and simplify crossings by allowing people to walk across just one direction of travel at a time. To account for human behavior, median refuges should be provided where pedestrians naturally cross. Studies show that median refuges at unsignalized crossings with a marked crosswalk provide a 46 percent crash reduction, while median refuges with an unmarked crosswalk provided a 39 percent crash reduction.
POSITIVE CHANGES
Positive Changes

Denver is ready to reinvent its transportation system with a new focus. As we make positive mobility changes towards a safer city, we will continue our history of innovative leadership.

Where We Started

The history of Denver is heavily influenced by rail, transit, innovation, leadership, and local spirit.

LATE 1800S

Denver leaders lobbied and raised funds to build a Union Pacific rail spur to Denver—a key move in making Denver a viable city. Denver Union Station opened in 1881 as a major transportation hub.

EARLY 1900S

The Stapleton International Airport opened and work began on Valley Highway (I-25). In the 1950s, Denver’s first City Traffic Engineer, Henry Barnes, promoted the “pedestrian scramble,” also known as a Barnes Dance, now re-emerging as an effective Vision Zero street design tool.

LATE 1900S

Major milestones occurred such as the formation of the Regional Transportation District (RTD), opening of the 16th Street Pedestrian Mall, opening of the Denver International Airport, and completion of the Transportation Expansion (T-REX) project.

EARLY 2000S

The City adopted ambitious documents like Blueprint Denver and the Strategic Transportation Plan. In 2004, Denver voters supported FasTracks, a program to build a regional transit system including 122 miles of new commuter and light rail, 18 miles of bus rapid transit, and 57 new stations. In 2010, Denver B-cycle was launched as the country’s first large-scale citywide bike sharing system.

PRESENT DAY

In recent years, the City has embarked on a number of groundbreaking initiatives.

• The Denver Moves plans were initiated/completed.
• The community-driven Denveright planning process began.
• The Bicycle and Pedestrian Crash Analyses and the Bike Safety Action Plan were published.
• Mayor Hancock announced Denver’s commitment to Vision Zero and the Action Plan was launched.

LOOKING AHEAD

It is time for a new era of transportation in Denver. We need a transportation system that honors where we’ve been and where we need to go. Vision Zero is an integral part of this approach, where we will prioritize human lives over other factors to be a truly equitable city.

“The reasons to transform are frustratingly obvious.”

To address the tragic reality that 61 people died on Denver streets in 2016, including 22 people walking and four people riding bicycles, Denver’s 2017 Mobility Action Plan calls for the acceleration of safety improvements and robustly pursuing Vision Zero.
What We’re Doing

Since announcing its commitment to Vision Zero in 2016, the City and County and Denver has made several important street changes. These upgrades, a few of which are highlighted on the following pages, have been in direct response to an existing or potential safety issue and have proven safety benefits. The City will continue making these types of changes in the future, consistent with the Build Safe Streets for Everyone and Create Safe Speeds actions presented in the previous section, and focused on the HIN and within CoC whenever possible.

30th Avenue & Downing Street

Before 2017, pedestrians walking to the 30th Avenue and Downing Street light rail station had to cross two lanes of traffic traveling 30 mph or faster. In 2017, Denver Public Works took action by adding a Rectangular Rapid Flash Beacon (RRFB) to raise driver awareness and increase yielding. RRFBs are not traffic signals, but push-button flashing warning devices that encourages motorists to yield to pedestrians and bicyclists. Studies show that the RRFB can significantly increase motorist yielding behavior at uncontrolled crosswalks, with motorist yield rates ranging from 34 percent to over 90 percent.
Morrison Road Speed Reduction
Nine people walking and biking were seriously injured on Westwood’s Morrison Road between 2012 and 2015. To address this safety issue, Denver Public Works lowered the speed limit from 35 to 30 mph and installed intersection curb extensions and a median between Perry and Raleigh streets, with intermittent refuges for people crossing. In addition to that, the City will be installing a new traffic signal and infrastructure improvements at Knox Ct/Alameda Ave/ Morrison Rd in 2017 that will enhance bicycle and pedestrian mobility. Studies show that traffic calming features such as these can reduce the number of injurious crashes by 6 percent on main roads. Other research shows that areawide traffic calming results in more walking and less injury for all road users.

13th Avenue & Broadway
A pedestrian was killed while walking in the crosswalk at 13th Avenue and Broadway in October 2016. In addition to this tragic hit-and-run crash, this intersection has been the site of nine other crashes since 2012 involving left-turning vehicles and pedestrians in the south crosswalk, despite the presence of a leading pedestrian interval. To address this issue, Denver Public Works took action in early 2017 by adding a protected left-turn phase at the intersection. Protected left-turn phases at signalized intersections separate vehicular, pedestrian, and bicyclist movements to minimize potential conflicts. Left-turn phases have been shown to result in a 45 percent reduction in pedestrian crashes.
HOW WE DEVELOPED THE PLAN
How We Developed The Plan

The Denver Vision Zero Action Plan is a result of a one-year analysis, action planning, and engagement process. The Project Team regularly met with the Technical Advisory Committee (TAC) and held topic- and agency-specific meetings to develop and refine the actions. The following individuals and organizations of the TAC were critical partners in shaping this Plan.

**Project Team**

**Core Team, City and County of Denver**
- Rachael Bronson, Denver Public Works
- David DiGiacomo, Denver Public Works
- Michele Shimomura, Dept. of Environmental Health
- Crissy Fanganello, Denver Public Works
- Steve Hersey, Denver Public Works
- Emily Snyder, Denver Public Works
- Justin Schmitz, Denver Public Works
- Andrew McFadden, Denver Public Works

**Toole Design Group**
- Rebecca Sanders
- Jessica Fields
- Joe Fish
- Spencer Gardner
- Geneva Hooten
- Belinda Judelman
- Megan Seib

**Sander Marketing Group**
- Steve Sander
- Alexis Nichols

**Technical Advisory Committee**

City and County of Denver Project Team Members
- Evan Dreyer, Mayor’s Office
- Ella Steuve, Community Planning and Development
- Gretchen Armijo, Dept. of Environmental Health
- Sarah Moss, Denver Fire Department
- Jay Henke, Denver Parks & Recreation
- Ted Block, Denver Police Department
- Mark Chuck, Denver Police Department
- Kate May, Budget Management Office
- Perla Gheiler, Office of Aging
- Aisha Rousseau, Office of Disability Rights
- Jerry Tinianow, Office of Sustainability
- Jolon Clark, City Council
- Anthony Aragon, City Boards and Commissions
- ShehilaRae Stephens, Denver Health and Hospital Authority

**TAC, continued**
- Cliff Lind, Mayor’s Pedestrian Advisory Committee
- Myles Tangalin, Mayor’s Pedestrian Advisory Committee
- Katie McKenna, Mayor’s Bicycle Advisory Committee
- Gosia Kung, Vision Zero Coalition
- Jill Locantore, Vision Zero Coalition
- Matthew Helfant, DRCOG
- Mark Northrop, DRCOG
- Steven Martingano, RTD
- Ken Brubaker, CDOT Headquarters
- Charles Meyer, CDOT Headquarters
- Jay Hendrickson, CDOT Region 1
- Clark Roberts, CDOT Region 1
- Steve Sherman, CDOT Region 1

**Other Partners**

Public Information Officers from the Mayor’s Office, Denver Public Works, Denver Police Department, Denver Environmental Health, Denver Marketing Office, Community Planning and Development, and Denver Fire Department

City and County of Denver:
- Nathan Batchelder, Excise and Licenses
- Colyn Harmon, Denver Fire Department
- Charles Stone, Denver Public Schools
- Nicole Portee, Denver Public Schools
- David Pulsipher, Denver Public Works
- Ana Claudia Magalhaes, Dept. of Environmental Health
- Dionne Williams, Office of Children’s Affairs
- Catherine Dockery, Office of Aging
- Robert Rock, Denver Police Department
- Lynn Holly, CDOT Safety Office
- Glenn Davis, CDOT Safety Office
- Ginna Jones, CDPHE
- Jen Knudsen, Colorado District Attorney’s Office
- Wave Dreher, AAA Colorado
- The Citizens of Denver
Vision Zero Technical Advisory Committee Charter 2016-2017

The TAC developed a committee charter in January 2017 to help guide its work on the Action Plan and the Vision Zero Program.

Overall Vision Zero Purpose Statement

Denver’s commitment to Vision Zero is based on the principle that traffic fatalities and injuries on our streets are unacceptable and preventable. Vision Zero reflects and emphasizes our core values – that everyone has a right to be safe on Denver streets no matter what mode of transportation they choose. The City and County of Denver and its partners commit to achieve a vision of zero fatalities and serious injuries on our streets. Denver will accomplish a roadmap to Vision Zero through the development of a comprehensive and multidisciplinary Action Plan inspired by data, innovation, equity and swift implementation.

Charge

The Vision Zero Technical Advisory Committee (TAC) has been assembled to provide technical support to Denver’s Vision Zero Program. The TAC will participate in and advise on community outreach, data analysis, standards, performance measures, and progress reports. These efforts will be implemented through a lens of equity and accountability, with documented goals and priorities. The TAC will jointly work with other functional teams within the City and County of Denver and will provide input into Vision Zero’s activities, projects, and strategic plans.

Guiding Principles

1. As a TAC, we will be accountable. We will:
   • Foster two-way communication with community engagement so that all people have the opportunity to have a meaningful impact;
   • Plan for and conduct evaluation of our efforts; and
   • Make data-driven and transparent decisions.
2. As a TAC, equity will be embedded in all that we do. We will:
   • Make streets safe for everyone; and
   • Focus on vulnerable communities that are disproportionately victims of traffic fatalities and serious injuries.
3. As a TAC, our work will demonstrate the urgency needed. We will:
   • Not postpone action;
   • Prioritize preservation of life and health as the most important community goals; and
   • Be innovative, human-inspired, and bold.
4. Traffic deaths are preventable and unacceptable:
   • We recognize that crashes are not “accidents,” but rather are a consequence of the physical environment and individual decision making;
   • Human error is inevitable and unpredictable but the consequence of error should not be severe injury or death. We will plan for this error in our transportation system; and
   • Safe designs will lead to safe streets.
5. We will prioritize speed reduction as an essential strategy to reduce fatalities and serious injuries because:
   • Speed fundamentally affects crash outcomes;
   • People are inherently vulnerable; and
   • We can reduce speeding through engineering, enforcement, and education working in tandem.

How to be part of Vision Zero

We’re all in this together. To carry out many of the actions presented in this Plan and to successfully eliminate traffic fatalities by 2030, we need your help. We all have a personal responsibility to make the right choices and to spread the word about why traffic safety matters—making the City’s efforts even more effective.

Your actions affect others.

- Be mindful and aware of your surroundings.
- Follow the rules of the road—drive the speed limit, do not text and drive, do not drive while impaired, and yield to other people.
- Be visible and predictable.

Remember that human lives are irreplaceable and our highest priority.

Please visit the Denver Vision Zero website (denvergov.org/visionzero) or join the Vision Zero Coalition (walkdenver.org/vision-zero) to become directly involved in events and activities.
