West 35th Avenue and Garfield Street
EVALUATION STUDY OVERVIEW

Mini Traffic Circle/Midblock Median Island Evaluation Study

What should neighbors expect?
Expect to see something new on the streets!

What: A demonstration of traffic calming treatments, including neighborhood traffic circles, using temporary materials.
When: June-July 2017, for four to six weeks.
Why: To evaluate the effectiveness of traffic calming treatments and inform future City efforts for Neighborhood Bikeways.
How: The City will collect data before and after the demonstration project. Please stay tuned for a survey about your experiences on these streets.

In 2015, the City studied the feasibility of creating three Neighborhood Bikeways throughout Denver, including West 35th Avenue and Garfield Street. These studies recommended a number of traffic calming treatments that would be new to Denver, such as neighborhood traffic circles. For that reason, the City is currently studying these treatments in more detail and will be testing them out in the summer of 2017. If they are effective in reducing vehicular speeds while minimizing adverse impacts, they may become part of the City’s Neighborhood Traffic Management toolbox.
