Byers Pl Sidewalks

Overview
The Byers Place project lies between Osceola Street and Newton Street in the Barnum neighborhood. The purpose of this project is to install curb, gutter and attached sidewalk to convey the local drainage. Flows generally travel from southwest to northeast in this section of the Weir Gulch Basin. Installing 6" curb & gutter, a new cross pan on Osceola, and a detached walk would direct flows away from the residents at 269 and 259 S. Newton Street and would provide improvements to a Denver neighborhood.

There is currently no storm system or curb and gutter on Byers Place, therefore the flows sheet flow directly toward properties to the north of Byers Place. Curb and gutter would redirect flows northeast away from the properties that have reported flooding, and into the collection system on Cedar Avenue to the north.
