W. Bayaud Ave. & S. Utica St.

Overview
Weir Gulch crosses under the intersection of S. Utica St. and W. Bayaud Ave. in two 6’x12’ reinforced concrete boxes. There are inlets located at each corner of the intersection that often are covered in debris.

Residents have reported that storm runoff pools at the intersection and heads towards the northwest corner of the intersection rather than draining into the inlets to Weir Gulch as intended. This project will add and upsize inlets and regrade the intersection to direct the flow to Weir Gulch. Concrete flatwork, such as curb, gutter, sidewalk and curb ramps and asphalt street paving will be part of the project.

Location
W. Bayaud Ave. & S. Utica St.
