Mt. Elbert General Storm: W. Hamilton Pl and S. Wolff

Project Overview

This project will install 3 new storm drain inlets. Two inlets will be placed at the dead end of Hamilton Pl while a third will be placed on the Southside of the T-intersection of Hamilton Pl/Wolff St. A new 12” storm line will connect these three new inlets with the existing storm sewer system that is already in place.

The purpose of the project is to correct a history of localized flooding where Hamilton Pl dead ends against the private development in the Bear Valley Shopping Center.
