**UDFCD CIP: Cherry Creek Stabilization-Holly to Iliff**

This is an ongoing cost-shared project between the City and the Urban Drainage and Flood Control District (UDFCD) to improve streambed stability to Cherry Creek by the UDFCD. The UDFCD is moving quickly to address stabilization measures (drop structures and stream-bank protection) in the Holly to Iliff segment.

Total project cost is estimated to be $12.1 million for the Cherry Creek stabilization measures. Of this total, $10.6 million is within the jurisdiction of the City & County of Denver, and $1.5 million is within the jurisdiction of Arapahoe County. The Capital Improvement Project budget is for the City of Denver share over multiple years.

**Benefits/Avoided Losses:**
In some areas, the streambed has dropped 10 feet, creating an unstable streambed and stream banks, a safety risk for users of the corridor, and the near-loss of the Cherry Creek Bike Trail, the most heavily used bike trail in the City. It will improve accessibility to the Creek, habitat along the creek and also improve water quality by reducing erosion and downstream deposition.
