Director, Office of Head Start

Results from CLASS™ Observations

Thank you for your support during the recent Office of Head Start onsite CLASS™ review conducted from 04/28/2015 to 05/01/2015 of your Head Start program (08CH1119).

Observations were conducted in preschool center-based classrooms using the Pre-K Classroom Assessment Scoring System (CLASS™). The CLASS™ tool looks at three domains and ten dimensions of teacher-child interactions and measures those observed interactions on a seven point scale. Please share these results with the appropriate governing board, policy council, management, staff and stakeholders.

About CLASS™

The Improving Head Start for School Readiness Act of 2007 requires that the Office of Head Start (OHS) include in the monitoring reviews of Head Start agencies a valid and reliable research-based observational instrument that assesses classroom quality, including the assessment of multiple dimensions of teacher-child interactions that are linked to positive child outcomes and later achievement.

CLASS™ assesses interactions between children and teachers in three broad domains of classroom quality: Emotional Support, Classroom Organization, and Instructional Support. The Office of Head Start believes that the domains of quality measured by CLASS™ remain central to its approach to child development and education and serve as important indicators of the future school readiness of all Head Start children.

For all dimensions*, the scoring principles are as follows¹:

**Low range score**
1—The low range description of the CLASS™ dimension fits the classroom and/or teacher very well. All, or almost all, relevant indicators in the low range are present.
2—The low range description of the CLASS™ dimension mostly fits the classroom and/or teacher, but there are one or two indicators that are in the middle range.

**Middle range score**
3—The middle range description of the CLASS™ dimension mostly fits the classroom and/or teacher, but there are one or two indicators in the low range.
4—The middle range description of the CLASS™ dimension fits the classroom and/or teacher very well. All, or almost all, relevant indicators in the middle range are present.
5—The middle range description of the CLASS™ dimension mostly fits the classroom and/or teacher, but there are one or two indicators in the high range.

**High range score**
6—The high range description of the CLASS™ dimension mostly fits the classroom and/or teacher, but there are one or two indicators in the middle range.
7—The high range description of the CLASS™ dimension fits the classroom and/or teacher very well. All, or almost all, relevant indicators in the high range are present.

*Note: The Negative Climate dimension is inversely scored with a higher score indicating lower quality. For all other dimensions and domains, a higher score indicates higher quality.

The scores from each class observation are averaged across the grantee to result in grantee-level dimension scores. The grantee dimension scores are then used to calculate the grantee-level domain scores.

The scores from CLASS™ observations can be used for a variety of purposes, including professional development, program improvement, policy, goal-setting and monitoring. The Office of Head Start began using the CLASS™ for monitoring purposes in FY2010 to collect information on the experiences of children at each grantee.

In FY2012, OHS refined the use of the CLASS™ in monitoring to include the use of a randomly selected sample of center-based preschool classes for observations, a clearly articulated methodology followed by CLASS™ reviewers, and additional support for the CLASS™ reviewer pool. For each preschool class selected in the sample, trained and certified CLASS reviewers conduct two 20 minute observations and score at the dimension level using a 7-point scale at the end of each observation cycle.
