When should you wash your hands?

- After using the restroom;
- After touching bare human body parts other than clean hands;
- After coughing, sneezing, using tobacco, or eating;
- When switching between working with raw food and working with ready-to-eat food;
- When changing gloves;
- During food preparation, as often as necessary to remove soils/contamination and to prevent cross-contamination; and
- After engaging in other activities that may contaminate the hands such as taking out the trash or handling dirty dishes.
1. Use soap and running water
2. Rub your hands and wrists vigorously
3. Wash:
   - Back of hands
   - Wrists
   - Between fingers
   - Under fingernails
4. Rinse hands
5. Dry hands with a paper towel
6. Turn off water using a paper towel

Foods must be rapidly cooled from 135°F in six hours, provided that within the first two hours the food is cooled from 135°F to 70°F.
Ice Bath Method

- The ice bath should be the same level as the product
- Stir frequently
- Consider also using ice wands

Shallow Metal Pans

- Use thinner pans for quicker cooling
- Divide food into smaller portions
- Use metal pans rather than plastic
- While cooling keep uncovered or loosely covered

Smaller Portions

- Cut dense foods into smaller pieces to ensure proper cooling
- Divide food into smaller portions

Foods must be rapidly cooled from 135°F in six hours, provided that within the first two hours the food is cooled from 135°F to 70°F.
