Fax: 720-913-4103  
[www.denvergov.org/assessor](http://www.denvergov.org/assessor)

Dear Taxpayer:

These instructions will assist you through the process of calculating the actual value of your business personal property, for both leasing and non-leasing companies.

You will need a complete asset listing that indicates year of acquisition, description of the asset, and original installed/historical cost. It will also be helpful to print the pages that follow this letter: Class Code, Trend 1, Trend 2, Percent Good, and Condition Code Tables. The Valuation Tables for tax years 2007 through 2013 can be obtained from the Assessor's website by clicking on "Forms", then under Business Personal Property select the "Valuation Table" based on the tax year for which you are calculating the actual value.

The class code table lists the classes that the assessor uses to categorize the property owned by your company. The Trend 1 table brings the cost basis to a current level of value (as of January 1st each year). In other words, if your company bought an asset in 2006, what is the approximate current cost, or also known as replacement cost new (RCN), to replace the item.

The Trend 2 table allows the assessor to adjust or roll back the RCN to a 06/30/2012 level of value as stipulated by Colorado Revised Statutes 39-1-104(12.3) (a) (I).

NOTE: The level of value factor will be frozen at 100% once the equipment is fully depreciated. The date changes every other year, so for 2013 the roll back date will be 06/30/2012. The Percent Good Table allows the assessor to apply depreciation to the cost basis. The Condition Code Table allows the assessor to make adjustments to the cost basis for adding sales tax, obsolescence, etc.

1) The first step of the process is to assign class types to the personal property on your asset listing. Compare the asset descriptions on your asset listing to the descriptions on the class code table. Write the class type next to the asset. Examples of class types are 3300 for office furniture, 4100 for telephone equipment, 4200 for computer equipment—other, 4800 for computer equipment—P.C. and accessories and 4926 for facsimile machines. After you finish assigning a class type to all of the personal property, summarize the information by year and class type. For example, total all of the 2006 class type 3300, and then total all of the 2007 class type 3300, etc.

2) The class code table contains a listing of which trend 1, trend 2, and percent good (depreciation) tables should be used for each class type. For example, class type 3300 personal property uses Trend 1 table # 0310, Trend 2 table # 03A, and depreciation table 10. You need to determine the proper tables for each class type of property.

3) The summarized cost basis for each class type by year is multiplied by a factor from each of the tables as mentioned above. To determine which factors to use, examine each table, and calculate the actual value for tax year 2013. The following example uses office furniture (class type 3300) purchased in 2006.

4) Determine the Trend 1 factor first. The left margin of the Trend 1 table lists year of acquisition and the top margin lists the various Trend 1 tables. The Trend 1 table for class type 3300 is table #0310. Find table # 0310 and go down that column until you get to the factor that corresponds with 2006, which is 116%.

5) Next determine the Trend 2 factor. The Trend 2 table has two columns labeled “Trend 2” and “Reverse Index”. For class type 3300 use the factor from Trend 2 table 03A which has a reverse index of 100%.

6) The last factor to determine is the percent good factor (see DEPR column on the class code table). The left margin of the Percent Good Table indicates year of acquisition and the top margin indicates the average economic life.

For the purposes of this example, our furniture class type 3300 property has a 10 year economic life. To determine the percent good factor, go across the top margin of the Percent Good Table to the 10 year column and go down that column to the factor that corresponds with 2006, which is 43%.

7) To complete the computation of the actual value for each class type by year, multiply the cost basis by the factors noted above. For example, if the summarized total for 2006 class type 3300 property is \$5,500, the actual value would be \$2,743 ( $5,500 \times 1.16 \times 1.00 \times .43 = 2,743$  rounded to the nearest \$1).

8) To determine the total actual value for the personal property owned by the business, add the actual values for all of the class types together.

If you have any questions, please call the Business Personal Property Tax Section at (720) 913-4067.

Sincerely,

Business Personal Property Section
