- These activities may be restricted due to recent surge in cases

COVID-19 Employee Q&A

SCENARIOS	ACTIONS/OPTIONS
#1: I believe I have symptoms of COVID-19.	<ul style="list-style-type: none"> You should stay home, do not come into work and get better. You should call your physician or Telehealth. You should contact your supervisor. Keep your supervisor informed. If you are well enough, and your supervisor approves, follow telework guidelines. You can return to work when symptoms have improved and at least 10 days have passed since symptom onset, and at least 24 hours have passed since resolution of fever without the use of fever-reducing medications. Please see Families First Coronavirus Response Act's Emergency Paid-leave (FFCRA) and FMLA section for employee leave info.
#2: I have symptoms of COVID-19, but my physician will not order a test due to my symptoms not being severe enough or I don't otherwise qualify for testing.	
#3: I have symptoms of COVID-19 and I am awaiting test results for COVID-19.	

COVID-19 Employee Q&A

#17: If someone in my household tests positive for COVID-19, is everyone then under quarantine, or just that person?

- Only symptomatic individuals should isolate themselves. Currently, if someone in a household tests positive for COVID-19, they receive instructions to isolate themselves, meaning they should not be in close, physical contact with other household members.
- Others in the household should continue to monitor themselves for symptoms, and if they develop symptoms, they should also isolate themselves at home to reduce the risk of potentially spreading contagions to others.
- Close contacts should limit their movement outside of the home and monitor themselves for symptoms. The sick should isolate.
