*As with all design and construction projects schedule indicated above is an estimate only. Many factors can cause delays in the delivery of the project, and schedules are subject to change.

Brief project description

The conversion from potable drinking water to untreated raw water at Harvard Gulch Park and Golf Course involves constructing a connection from the City Ditch, expanding the lake at the golf course to increase storage capacity and the installation of a new pump station. This project will save forty-four million gallons of potable water each year.

The City Ditch as it flows from the southwest to Harvard Gulch
