

Mpox: What You Should Know

Symptoms

Rash
(raised red bumps)

Intense Headache

Muscle Aches

High Fever

Swollen Glands

What To Do

If you think you have been exposed to mpox (monkeypox) or are experiencing symptoms, see a healthcare provider for evaluation.

People who have been recently exposed to mpox or are at high risk for exposure should get a vaccine. Visit www.denvergov.org/monkeypox for information about vaccine eligibility, vaccine clinics, and how to request an appointment.

Anyone can call 1-877-462-2911 for assistance with information about mpox symptoms, evaluation and testing, and vaccines.

Mpox: The Facts

- Mpox is typically spread through close physical contact.
- Close physical contact may include sexual contact of any kind; sharing bedding, clothing, or towels with someone who is sick; or prolonged face-to-face exposure to a person with mpox.
- Anyone can get mpox.
- Mpox looks like a rash (raised red bumps). Other symptoms are intense headache, fever, muscle ache, swollen glands and feeling very tired.
- Be sure to see a healthcare provider if you develop a new rash or bumps anywhere on your body.
