*As with all planning projects the schedule indicated above is an estimate only. Many factors can cause delays in the delivery of the project, and schedules are subject to change.

Brief Project Description

Sloan's Lake is a beloved regional asset in northwest Denver that is in need of environmental improvements to remain a resilient ecosystem and recreational amenity.

The Sloan's Lake Environmental Assessment will include data collection, analysis, lake restoration planning, and initial concept design alternatives to create a vision for the future of the lake. This project will involve community outreach, education, and engagement. The project will result in a concept plan document and planning level cost estimate to allow Denver Parks & Recreation, Denver Department of Transportation & Infrastructure, Mile High Flood District, and other project sponsors to determine a clear direction and vision to move forward with design and implementation.
