Calling All Air Ambassadors

YOUR VOICE MATTERS.

The Love My Air (LMA) team would love to have your voice in finding solutions to fight poor air quality! We are fully committed to spreading awareness to our schools and communities. The Love My Air program has partnered with 40 Denver Public Schools to provide air sensors that collect real-time data on the air quality in the surrounding areas. Currently, the LMA team is identifying teachers, students, and nurses (Air Ambassadors) to act as a liaison between the LMA and the community. We also have a Love My Air app that displays the air quality information and sensors at the schools.

Love My Air has been a very successful program and we want to connect with Air Ambassadors to keep the momentum going. We look forward to getting to know all of you and want to schedule time to come and meet with you.

Our Mission: Empowering Denver's communities to live better, longer by reducing air pollution and limiting exposure through behavior change, advocacy, and community engagement.

Your New LMA Team

Love My Air has a new look, kind of. While the program is the same, there are some new faces that will continue to bring the LMA program to our schools and the community. The Love My Air program is part of Denver Department of Public Health & Environment (DDPHE) and is designed to improve Denver's air quality by measuring, monitoring, and reducing air pollution surrounding metro-area schools. Meet our Team:
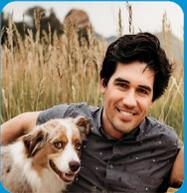

#Live Better

- **Ephraim Milton** is the Outreach/Education Coordinator for the Love My Air Program. Has worked in both the education and outreach field for more than 15 years and has an affinity for working with youth. He has worked in the public health field for just over a year and a half and wants to help spread awareness to Denver's communities. He is the primary contact on the LMA team and can be reached at Ephraim.Milton@denvergov.org

- **Tehya Stockman** is a current Air Quality Technical Intern at the Denver Department of Public Health and Environment. She is a PhD student in Environmental Engineering focusing on Air Quality at CU Boulder where she is analyzing the variability of PM2.5 across the City of Denver using the Love My Air Sensor Network. She has a passion for bringing data to the public and to be used in classrooms. In her free time, she draws, hikes with her dog, and plays the mandolin. She can be reached at Tehya.Stockman@denvergov.org

- **Brendan Lawlor** is the Air Quality Analyst for the LMA program. While new to the team, he has worked with the program through a previous employer and is excited to help move LMA forward to better serve the community. When away from the office, he can be found hiking in the Colorado mountains or biking with his daughter around Denver. Feel free to reach out to him at Brendan.Lawlor@denvergov.org.

- **Bill Obermann** is the interim manager of the LMA program. He is thrilled to be a part of this team and getting to know all our partners. He has worked in air quality for many years and was closely working with Aubrey Burgess and Michael Ogletree on LMA behind the scenes before they left. He loves playing music, building furniture out of wood, and exploring the neighborhoods of Denver. Reach out to him at William.Obermann@denvergov.org
